

Printing PDF's on public PC's

A workaround to some pdf printing problems on library PCs:

- Select Print
- In resulting printing popup, **change the printer to CutePDF** and select Print.
- This then opens to a **Save As** pop up
- **Save the pdf again** using a slightly changed name so as to not replace the original document
- Open this new pdf
- Now when you go through the printing procedure using Printsmart you can do anything re: printing you can do with a Word document.
